	was bordered to the northwest by a safety embankment of the Tisza River, about 6 meters high. Its soil was partially marshy in the northern section even during the summer.	
1.	Comment. The information that a runway was under construction at Szolnok airfield in 1951 was previously received. According to the reference report, the runway had a length of 2,100 meters.	25X1
2.	Comment. It was previously believed that the field was occupied by an air force officer school (Kilian Gyoerby) and a fighter unit equipped with MiG-15s. According to the present report, aircraft of a type similar to the Yak-9 were stationed at the field at the same time i.e. October 1951. It is possible that the aircraft allegedly of MiG-15 type, which were mentioned in reference report, were stationed in Szolnok only temporarily.	25X1
3.	Comment. This airfield is reported for the first time. Probably, a small airfield for courier planes of the Soviet Army was established there. This field is of no importance for military purposes. For location sketch of airfield, see Annex 1. For layout sketch of Szolnok airfield,	25X1
